

# Mold-X Neutralizer™

The Mold-X Neutralizer provides an effective tool for cleaning and treatment of mold contaminated building surfaces.

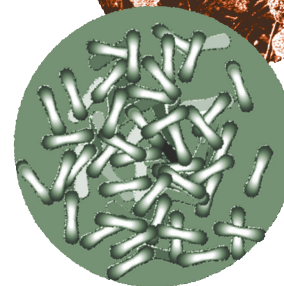

Mold-X is sprayed on surfaces as a one stage process. Mold-X Neutralizer has proven to be one of the most effective and least expensive treatments of its kind on the market today, providing an intelligent, proactive answer at a fraction of building material replacement costs.

Mold-X can be used to neutralize mold on surfaces including basement or crawl space walls, floor joists, subfloors, etc.

While Mold-X will neutralize mold at the time of application, it will not remove the neutralized mold which may still be visible.

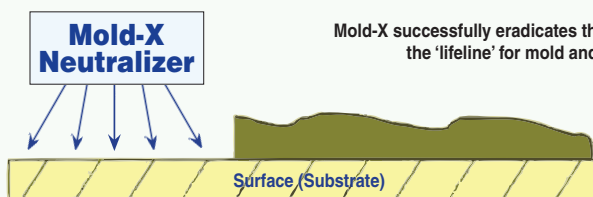

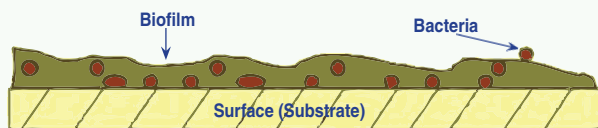

Mold

Bacteria

## How Mold-X Works...

The stronger strains of mold & bacteria attach themselves to surfaces called 'biofilms'. When an organism is within the biofilm, it is extremely difficult to reach & eradicate.

Mold-X successfully eradicates the biofilm: the 'lifeline' for mold and bacteria.

## Characteristics & Benefits

- Easy Installation
- Cleans & Prevents Mold, Mildew, Algae and Bacteria Growth on Surfaces
- Penetrates Rather than Coats – Prevention Comes from the Inside Out
- Resists Water & Can be Painted Over
- Bonds to Fiber – Won't Wash Off

Mold-X does not provide a warranty that mold will not grow back in the future. To prevent future mold, procedures must be taken to keep organic material dry.
